

Estonia presence & settlement plan

How Metrico intends to establish a real Estonian base: initiate e-Residency in parallel, register the company after committee approval, then relocate once the founder's current construction project finishes — lean early operations with serious commitment.

Planned sequence (honest)

Initiate e-Residency now (can run in parallel with committee prep; not yet started). Register the Estonian company after committee approval. Complete e-Residency and company setup before physical relocation. Relocate with family after the current construction project in the home country finishes — no invented calendar dates.

Why Estonia

Estonia is the intended EU company base and early product-learning environment — not an empty letterhead HQ.

- Digital society and startup ecosystem suited to building and selling software from an EU base.
- EU legal and commercial foothold for a repeatable SaaS, aligned with the market-map beachhead.
- A demanding automation / digital culture that helps surface product weaknesses early — beachhead validation before costly mistakes.

12-month presence model

Serious commitment with lean early ops — family relocation as a commitment signal, not lifestyle marketing.

- Founder relocates with spouse once the current home-country construction project is complete.
- Hire one technical / developer team member in Estonia.
- Start from home / residence; open a physical office later only if the team grows.
- Operate Metrico actively in the Estonian environment to earn local feedback — not a paper presence.

First 90 days (Estonia-related)

Near-term actions tied to the Estonian base — after the sequence above allows them:

- Register the Estonian company (after committee approval).
- Meet accelerator(s) and relevant ecosystem contacts.

Local validation intent

Run Metrico with real operating discipline in Estonia first: find product gaps in a digitally mature market before scaling spend elsewhere. Beachhead learning — not claimed European traction.

Language roadmap

Product and GTM languages: English first. Next: German for DACH (Germany, Austria, Switzerland). We do not claim German as a common language of the Netherlands or invent other locale claims.

Year-1 budget assumption

Planned year-1 living + go-to-market budget assumption: €40,000 — covering residence for the founder, spouse, and two children, plus marketing / exhibitions and related early GTM costs. Assumption for planning — not a grant claim or audited spend.

What this is not

- Not claimed completed e-Residency, company registration, or physical relocation today.
- Not invented customers, office leases, headcount, or M&A narrative.
- Not speculative fluff or guaranteed timeline dates for committee optics.

In one list

- Sequence: initiate e-Residency now → company after approval → relocate after current project; e-Residency + company before entry.
- Presence: relocate with spouse; hire one engineer; home office first.
- 90 days (Estonia-related): company registration + accelerator meetings.
- Validate locally in Estonia's digital environment; languages EN → German/DACH.
- Year-1 living + GTM budget assumption: €40,000 — no fake traction.
