

Evaluator demo guide

A 10-minute English walkthrough of the live Metrico product — for partners, investors, and program evaluators. No install required.

Demo data is sample data

The demo account uses labeled sample projects for product evaluation. It is not presented as live paying customers or production traction.

Open the live app (2 minutes)

Use a desktop browser first; the same app also runs on phone and tablet.

1. Open the live application (button below).
2. On the sign-in screen, switch language to English with the FA/EN control (top area).
3. Open the side menu and choose Guide.
4. In Guide, find Try demo account. Email is demo@metrico.app.
5. Enter the demo password provided by the founders (email hello@metrico.app if you do not have it). Password is not stored in public source code.
6. You enter a read-only Ark-level sample. Browse freely; saving edits is intentionally disabled.

Demo credentials

Use only the labeled demo account for evaluation.

- Email: demo@metrico.app
- Password: request from founders via hello@metrico.app (set in auth; not published in the repository).
- Scope: read-only sample project, unit grid, installments, finance views, inventory snapshot, and owner-portal style flows.

What to inspect (8–10 minutes)

Suggested path through the product surface:

1. Dashboard — sample project cards and high-level status.
2. Open the sample project — colored unit grid (available / reserved / sold).
3. Tap a sold unit — buyer fields, contract amount, installment schedule.

4. Project finance / expenses views — cost and cash tracking UI.
5. Owner portal concept — secure buyer update link without full ledger access.
6. Menu → Subscription Plan — Starter / Plus / Pro / Arc tiers (demo runs as Ark for showcase).
7. Optional: Guide sections inside the app for maps, inventory, energy, and takeoff (higher tiers).

Optional: create your own free account

If you want to type your own data (not required for evaluation):

1. Register with email and password. Activation uses an admin code for security. Or stay on the labeled demo for a faster review.
2. Open settings (gear) and add company name and logo — used in the header and PDF reports.
3. Add floors and units. Use the colored unit map; open a unit for buyer, contract, and installments.
4. Record expenses and income, manage investor shares, and share owner portal links.
5. Export backups from the app. See the Privacy page for hosting and data rights.
