

2–3 year market map

Where Metrico intends to spend effort over the next two to three years: dual markets with a heavier European beachhead via an Estonian technical base, honest early-adoption targets, and concrete near-term field actions.

Plan assumptions / operational goals — not guarantees

Numbers and weights on this page are founder planning assumptions and go-to-market goals. They are not revenue forecasts, contracted pipeline, or promised conversion rates. We do not invent customers, logos, or traction charts.

Year-1 geographic effort / focus weights

These percentages describe where we expect to spend time and attention in Year 1 — not a claimed revenue split by country.

Iran — ~30% of effort

Familiar operating market: language, relationships, and field workflows the founders already know. Useful for product feedback and early operators.

Estonia — ~50% of effort

Primary company base and technical hiring environment; first customers and pilots; denser product feedback. Beachhead for learning how to sell into the EU — not “50% of revenue from Estonian contractors.”

Other markets — ~20% of effort

Later European outreach after the Estonia anchor is working — selective, not a spray of fake regional claims.

Committee framing: Estonia as HQ / base, talent space, early pilots, and EU learning hub — alongside Iran as a known operating market.

Year-1 customers (ICP)

Early buyers and design partners are a mix of construction operators who feel the unit–finance–progress gap:

- Builders / developers.
- Executors and contractors.
- Technical offices and site supervisors.

Primary go-to-market thesis: grow Metrigo as a leading app in its domain through product strength and field referrals.

12-month adoption goal (assumption)

Operational target: roughly 30–60 early users in the first twelve months. Some will enter with strong discounts; referral discounts will reward introducing colleagues. Frame as early adoption and GTM mechanic — not an ARR promise or paying-conversion guarantee.

- Target band: ~30–60 early users (assumption).
- Discounted entry for selected early operators.
- Referral ladder for introductions to peers on other sites.

Next 90 days — concrete actions

Near-term field work the founders will actually do:

- Attend one construction / industry exhibition.
- Meet several construction companies in person.
- Visit construction sites and workshops.
- Individual talks with site supervisors to introduce the product and start a first marketing network.

Thesis: the best marketer is a power user — site supervisors who run Metrigo can refer peers more credibly than cold ads.

Channels we will use: person-to-person introductions, visits to notable construction firms, relevant construction and IT exhibitions, and social / domain platforms. The team will travel for intros when needed. No invented logos or fake stats.

Year 2–3 expansion (directional)

Direction only — not invented metrics. After Year-1 beachhead learning:

- Presence on relevant EU shared / industry platforms where construction buyers look.
- European marketing partners where a real fit exists.
- Direct outreach to notable construction firms.
- Continuous competitor gap analysis to keep Metrigo's strengths clear and product-led.

What we will not do

- Invent customers, paying counts, or growth charts for committee optics.
- Treat focus weights as a promised revenue share by country.
- Promise a precise paying-conversion rate before we have measured one.

Related evidence

Founder field credibility and the current early circle are summarized on the market-evidence sheet: [Market evidence & early validation](#)

In one list

- Year-1 effort weights (not revenue): Iran ~30%, Estonia ~50%, other ~20%.
- ICP mix: builders, contractors/executors, technical offices; GTM = grow Metrico as the leading app.
- Adoption assumption: ~30–60 early users with discount + referral mechanics — not ARR.
- 90 days: one exhibition, firm meetings, site visits, supervisor network.
- Year 2–3: EU platforms, partners, direct outreach, competitor gap analysis — no fake traction.
