

Estonia presence & settlement plan

How Metrico intends to establish a real Estonian base: initiate e-Residency in parallel, register the company after committee approval, then relocate once the founder's current construction project finishes — lean early operations with serious commitment.

Planned sequence (honest)

Initiate e-Residency now (can run in parallel with committee prep; not yet started). Register the Estonian company after committee approval. Complete e-Residency and company setup before physical relocation. Relocate with family after the current construction project in the home country finishes — no invented calendar dates.

Why Estonia (economic benefit)

Estonia is the intended EU company base for a multi-tenant SaaS export business — not a local services shop and not an empty letterhead HQ. The goal is to incorporate, hire, pay taxes, and sell software from Estonia to construction teams across markets.

- Register an Estonian company and operate Metrico as EU-based SaaS (billing, compliance, and commercial contracts from Estonia).
- Hire at least one software engineer in Estonia / EU — real employment and skills contribution, not freelancing-as-visa theatre.
- Export a repeatable product (annual SaaS plans) from Estonia: same codebase, many customers — marginal cost is hosting/support, not rebuilding a local agency stack per project or country.
- Use Estonia's digital environment as a demanding beachhead to find product gaps early before costly GTM mistakes elsewhere.

12-month presence model

Serious commitment with lean early ops — family relocation as a commitment signal, not lifestyle marketing. Benefit to Estonia comes from company formation, hire, and SaaS export — not from offering on-site local contracting services.

- Both founders relocate once the current home-country construction project is complete (family move).
- Hire one technical / developer team member in Estonia (preferably Estonia / EU).
- Start from home / residence; open a physical office later only if the team grows.
- Operate Metrico actively from Estonia: EU billing path, local validation, and outbound SaaS sales — not a paper presence.

First 90 days (Estonia-related)

Near-term actions tied to the Estonian base — after the sequence above allows them:

- Register the Estonian company (after committee approval).
- Meet accelerator(s) and relevant ecosystem contacts; begin engineer hiring search.

Local validation intent

Run Metrico with real operating discipline in Estonia first: find product gaps in a digitally mature market before scaling spend elsewhere. Beachhead learning for an international SaaS — not claimed European traction and not a local-only services business.

Language roadmap

Product and GTM languages: English first. Next: German for DACH (Germany, Austria, Switzerland). We do not claim German as a common language of the Netherlands or invent other locale claims.

Year-1 budget assumption

Planned year-1 living + go-to-market budget assumption: €40,000 — covering residence for the founder, spouse, and two children, plus marketing / exhibitions and related early GTM costs. Assumption for planning — not a grant claim or audited spend.

What this is not

- Not claimed completed e-Residency, company registration, or physical relocation today.
- Not invented customers, office leases, headcount, or M&A narrative.
- Not a local construction contracting / agency business pretending to be a startup.

In one list

- Sequence: initiate e-Residency now → company after approval → relocate after current project; e-Residency + company before entry.
- Presence: two founders relocate; hire one engineer; home office first; SaaS export from Estonia.
- 90 days (Estonia-related): company registration + accelerator meetings + hire search.
- Validate in Estonia's digital environment; languages EN → German/DACH; sell multi-country SaaS.
- Year-1 living + GTM budget assumption: €40,000 — no fake traction.
