

Business plan & founder summary

A concise committee pack for Metrico: problem → product → model → go-to-market, plus founder CV highlights. Live product first; no invented traction.

Committee short form — not a 30-page novel

This sheet summarizes the operating plan and founder background. Detailed pricing, market map, early evidence, and Estonia presence live on linked pages. We do not invent paying customers, revenue charts, or M&A stories.

1. Business plan

Problem

Mid-size developers and contractors still run the pre-sale → build → handover loop across spreadsheets, chat, and paper:

- Unit status, buyers, and installments live in Excel, chat, and notebooks.
- Site teams need mobile tools that work with weak connectivity.
- Owners ask for progress while full ledgers must stay private.
- Generic CRMs and heavyweight construction suites miss the unit + installment + site-finance reality of mid-size builders.

Solution

Metrico is a bilingual offline-capable PWA — an all-in-one site operations tool for the construction site (the Swiss-army knife operators reach for when units, money, and owners collide):

- Visual floor / unit map: sold, reserved, vacant — not only tables.
- Auto math: contract from $m^2 \times \text{price}$, remaining debt, average sale price / m^2 .
- Installments, project costs, investor shares, check & cash reports, PDFs.
- Owner portal + progress gallery — updates without exposing full ledgers.
- Installable PWA with offline sync for weak-signal sites.

Positioning in one line: the all-in-one site operations tool for mid-size construction — credible field utility, not a gimmick brand.

Product stage

Metrico is a live SaaS / PWA in production use for demos and onboarding — not a slide-only concept.

- Four annual plans: Starter (free) → Plus → Pro → Ark.
- Labeled demo account for evaluators (sample data, not traction).
- Higher tiers unlock inventory, contracts & QC, takeoff, and energy tools.

- Early validation: founder as active user; small feedback circle; one live project — see market-evidence sheet.

Market focus

Year-1 effort weights (planning assumptions — not a promised revenue split):

- Iran ~30% — familiar operating market for feedback and early operators.
- Estonia ~50% — company base, technical hiring, early pilots, and EU beachhead learning.
- Other markets ~20% — selective later European outreach after the beachhead works.

Business model

Repeatable B2B SaaS on annual prepaid plans — software subscriptions, not custom agency rebuilds per project.

- Starter — Free (1 project · core tools).
- Plus — €50 / year · Pro — €100 / year · Ark — €150 / year.
- Primary revenue: paid upgrades. EU card billing under development; Iran checkout path exists. No invented ARR.

Full ladder and unit-economics assumptions: [Revenue & unit economics](#) .

Go-to-market — next 90 days

Near-term field work (aligned with the market map):

- Attend one construction / industry exhibition.
- Meet several construction companies in person; visit sites and workshops.
- Individual talks with site supervisors to seed a referral network.
- Advance committee / e-Residency prep in parallel — company registration after approval (see Estonia presence).

12-month priorities (business-first)

Ordered for company building. Family relocation is an enabling step after the current construction project — detailed sequence on the Estonia presence sheet.

1. Establish the Estonian company after committee approval; complete e-Residency / company setup needed to operate.
2. Local validation: run Metrigo in Estonia's digital environment; gather early-user feedback.
3. Hire one developer preferably in Estonia / EU.
4. Investor and customer intro platforms plus a realistic exhibition calendar.
5. Grow a site-supervisor referral network and run demos.
6. Family relocation and suitable housing after (or alongside completion of) the founder's current construction project — enabling the Estonian base, not the headline goal of this plan.

Relocation sequence and year-1 presence assumptions: [Estonia presence plan](#) .

Team

Current team is intentionally lean:

- Founder (Mehrzaad Saeedi) — product, domain, and go-to-market · 70%.
- Co-founder (Serveh Khoshkalam) — finance & accounting consultant/analyst; industrial accounting + rural civil engineering; Sepehr finance manager · 30%.
- Next hire: one developer, preferably Estonia / EU.

Risks & mitigations

Managed risks — honest, not fear-mongering. Mitigations are operational, not guarantees.

Geopolitical spillover (Russia–Europe)

Risk: regional instability affecting travel, sentiment, or capital flows. Mitigation: EU company base, English-first product, diversified beachhead learning — not single-country dependency.

Middle East recession pressure

Risk: weaker demand in familiar early markets. Mitigation: Year-1 effort already weights Estonia / EU beachhead; Iran remains a feedback market, not the end destination.

Capital / asset transfer to Estonia

Risk: timing and compliance friction moving capital. Mitigation: lean year-1 budget assumption (€40k living + GTM on Estonia sheet); start home-office; no invented grants.

Product intro timing vs finding prospects

Risk: product readiness and prospect pipeline misaligned. Mitigation: founder-as-user + supervisor referral network; exhibition and site visits in the 90-day plan.

Competing where markets/marketing are less known

Risk: rivals with deeper local marketing. Mitigation: domain wedge (units + installments + owner portal), honest competitor sheet, beachhead learning before spray spend.

EU payments / billing readiness

Risk: European card checkout still under development. Mitigation: labeled paths (email / founder codes); prioritize EU billing after company setup.

Early-team bandwidth

Risk: two-person team capacity. Mitigation: one EU developer hire as priority #3; scope GTM to exhibitions, referrals, and demos — not heavy paid media.

Language / localization & CAC uncertainty

Risk: beyond EN/FA; CAC not yet measured. Mitigation: EN first, then German/DACH on roadmap; treat CAC/LTV as early model on revenue sheet — no fake conversion rates.

Ask / next (committee path)

What we seek from Startup Committee recognition:

- Recognition to build Metrico as an Estonian / EU SaaS company — hire specialized engineering talent and operate from Estonia's digital infrastructure.
- A clear path to register the company after approval and complete EU-ready billing and compliance.
- Evaluators can open the live app and labeled demo (see Guide) — product evidence before paperwork claims.

2. Founder — MEHRZAD SAEEDI

Founder CV highlights for committee review. Contact and LinkedIn below; personal address and family details omitted.

Why this founder fits Metrico

Familiar with construction-site gaps from three angles — so product direction comes from the field, not from slides alone:

- Urban planning / GIS expert inside a municipality.
- Builder / owner–investor on construction projects.
- Construction project manager and site superintendent — day-to-day workshop and site supervision (including ~4 years in superintendent / workshop supervision as project manager and as builder/investor).
- Also ~10 years spanning investor, supervising engineer, and project superintendent roles (see market-evidence).

Education

- Master of geological sciences (petrology) — University of Birjand — completed 2011 (brilliant-talent recognition).
- Bachelor of geology — University of Zanjan — completed 2007.

Selected roles (CV + field years)

- GIS and urban expert — Baneh Municipality — full time, 2013–2016.
- Mining exploration supervisor — Baneh Municipality — full time, 2009–2013.
- GIS expert — Baneh Governorate — 2009 (part time, ~3 months).
- Manager — Baneh Aftab Derakhshan shopping center — full time, 2016–2020.
- Surveyor / aerial-photo interpreter — Mabna Naghshe Iranian Bakhtar (own company) — part time, ongoing as of CV.
- Earlier: computer lab supervisor (Zanjan University, 2005–2007); geology map field expert; geological software instructor (Birjand University, 2009); surveyor for water resources and judiciary (part time).
- Additional field years (founder statement, beyond the printed CV timeline): ~4 years site superintendent / workshop supervision as construction project manager and as builder/investor.

Skills relevant to Metrico

- GIS, mapping, surveying, aerial-photo interpretation; municipal urban / civil project courses.
- Tools: ArcGIS track, AutoCAD, Global Mapper, RockWorks, Surfer; total station and multi-frequency GPS.
- Mine supervision; online / web map preparation; ICDL computer skills.
- Domain: construction project oversight, unit/finance/progress pain from builder and supervisor seats.

Languages

Persian (native). English — general and specialized (stated on CV). Product ships bilingual EN / FA.

In one list

- Live bilingual SaaS for units, installments, site finance, and owner updates.
- Model: annual plans Free → €50 / €100 / €150; no invented ARR.

- 12-month priorities: company + e-Residency → local validation → hire developer → intros/exhibitions → supervisor network → family relocate as enabling step.
- Team today: two founders (product/GTM + accounting/finance design); next hire = EU developer.
- Founder: municipal GIS/urban + geology MSc + ~4y site supervision + builder/investor — LinkedIn linked.
