

Metrico

Live MVP · multi-tenant SaaS · not a local services shop

Stage: Live product

Company: planned OÜ

Brief v1

Evaluator bottom line. Metrico is a *deployed* bilingual construction SaaS / PWA — open it in a browser today. It is sold as annual software subscriptions to many customers on one codebase. It is *not* a consulting agency, not custom build-per-project, and not a slide-only idea. Estonian company registration is planned after Startup Committee recognition — not claimed as completed today.

1. NOT AN IDEA — LIVE WORKING PRODUCT

Live app	https://mehrzhad1420.github.io/metrico_by_cursor/index.html
Landing (EN)	https://mehrzhad1420.github.io/metrico_by_cursor/landing/
Demo guide	https://mehrzhad1420.github.io/metrico_by_cursor/landing/guide.html
Demo login	demo@metrico.app — password via private form field / founders (not in public git)
Auth & data	Supabase Auth + PostgreSQL; plan/role gates; production hosting on GitHub Pages
Field proof	Founder runs one live construction project on Metrico daily; two founders + four operator reviewers

Early validation is honest: live product + founder-as-user + small circle — not invented paying-customer charts.

2. MVP READINESS — MODULES ALREADY SHIPPED

- Unit / floor grids (sold, reserved, vacant)
- Sales, reservations, installment schedules
- Project finance, costs, investor shares
- Owner portal + progress gallery
- PDF reports; contacts; reminders
- Team plan / RBAC
- Inventory; contracts; QC (higher tiers)
- Takeoff & energy tools (Ark)
- Maps / KML; in-app drawings
- Bilingual EN + Persian (RTL) UI
- Installable PWA + offline-capable sync
- Labeled evaluator demo account

3. NOT A LOCAL SERVICE BUSINESS

- **Product:** one multi-tenant SaaS codebase.
- **Revenue:** annual subscriptions (Starter free → paid tiers), not hourly consulting.
- **Delivery:** customers self-serve in the app; we do not rebuild custom software per site.
- **Growth:** add customers at hosting/support cost — not linear headcount per project.

4. INTERNATIONAL SCALE PATH

- **~30% effort:** familiar market — learn workflows (not the end destination).
- **~50% effort:** Estonia / EU — company, hire, outbound SaaS sales.
- **~20% effort:** later markets; German / DACH localization next after EN.
- Same product core across countries; localization and billing layers expand reach.

5. BENEFIT TO THE ESTONIAN ECONOMY (FORWARD-LOOKING, HONEST)

- Register an Estonian company and operate Metrico as EU-based SaaS (contracts, compliance, billing from Estonia).
- Hire at least one software engineer in Estonia / EU — real employment, not freelancing-as-visa theatre.
- Export multi-tenant software from Estonia to construction teams in multiple countries.
- Pay taxes and contribute skills inside Estonia's digital / startup ecosystem.

Company status today: No Estonian OÜ is claimed as registered in this pack. Cap table shows intended founder split (70% / 30%) for the forthcoming company statutes. Sequence: committee recognition → company registration → relocate after current home-country construction project finishes.
