

Metrico

Construction command center — units, money, owners

Live SaaS / PWA

EN · FA

One-pager rev 2

Metrico is a **live** bilingual SaaS / PWA — not a slide deck. It replaces spreadsheet chaos for mid-size developers and contractors: unit sales, installment schedules, project finance, and owner updates in one offline-capable app sold on annual plans to many customers on one codebase.

PROBLEM

- Unit status, buyers, and installments live in Excel, chat, and paper.
- Site teams need mobile tools that work with weak connectivity.
- Owners ask for progress; full ledgers must stay private.
- Generic CRMs and project tools miss pre-sale + installment reality.

SOLUTION

- Visual floor / unit map (not only tables): sold, reserved, vacant.
- Auto math: contract from $m^2 \times \text{price}$, remaining debt, avg sale price / m^2 .
- Installments, project costs, investor shares, check & cash reports, PDFs.
- Owner portal + progress gallery — updates without exposing full ledgers.
- Installable PWA with offline sync for weak-signal sites.

INNOVATION

Metrico's innovation is not another generic project board. It is a repeatable operating system for the construction pre-sale → build → handover loop: visual unit grids, installment math, site finance, and owner updates in one bilingual offline-capable product. Generic CRMs track contacts; heavyweight construction suites optimize job-site logistics. Mid-size developers still run units, buyers, and receivables in spreadsheets and chat. Metrico closes that gap with software leverage — the same SaaS sold on annual plans — so growth does not require rebuilding a custom agency stack for every project or country.

DIFFERENTIATORS VS GENERIC CRM / PROJECT TOOLS

- **Pre-sale → handover in one stack** — units, buyers, installments, site finance, owner comms.
- **In-app drawings** — DWG / DXF / PDF / BIM-style files viewed inside the product (no export hop).
- **Maps with market signal** — project pins + KML export including avg sale price / m^2 by site.
- **Takeoff & energy (Ark)** — 5-category material estimate, map digitizer, building energy tools.
- **Contracts & QC (Pro)** — contractor agreements, progress statements, activity-linked quality checks.
- **Inventory + tax prep (Pro)** — materials stock / allocations; tax-system readiness path.
- **Privacy-minded assistant** — rule-based answers on your data; chat not sent to external LLMs.
- **Bilingual by design** — English + Persian (RTL), built for cross-border teams — not a bolted-on translate.

WHY THIS IS A STARTUP (NOT A LOCAL SERVICE BUSINESS)

- **Live product today** — open the app URL; labeled demo exists. Not an idea-only application.

- **Repeatable SaaS** — same product sold on annual plans, not custom agency work per site.
- **Software leverage** — growth via product and subscribers, not linear headcount per project.
- **International path** — familiar market for learning → Estonia / EU company + outbound sales → DACH localization.
- **Estonia benefit** — incorporate, hire an EU engineer, export SaaS, pay taxes from an Estonian base (OÜ planned after recognition — not claimed registered today).

PRODUCT STAGE

- **Live MVP** — production app for demos and onboarding (open the URL).
- Four plans: Starter (free) → Plus → Pro → Ark (+ Team).
- Labeled demo account for evaluators (sample data, not traction).
- Higher tiers: inventory, contracts, takeoff, energy tools.

MARKET & GTM

- **Wedge:** mid-size developers drowning in unit + installment ops.
- **~30% effort:** familiar market — learn (not end state).
- **~50% effort:** Estonia / EU company, hire, outbound SaaS.
- **~20% effort:** later Europe; German / DACH next after EN.

BUSINESS MODEL

- B2B subscription, annual billing.
- EU list: €50 / €100 / €150 per year (Plus / Pro / Ark).
- Local checkout in progress; EU card billing under development.
- Land free → expand projects and modules as portfolios grow.

ESTONIA FIT

We seek Startup Committee recognition to build Metrigo as an Estonian / EU SaaS company: hire specialized engineering and GTM talent, complete EU-ready billing and compliance, and use Estonia's digital infrastructure as the operating base — while expanding into international construction markets. Iran (or any single early market) is a learning wedge, not the end state.
